MAID Labs Technologies

How to get these reports?

Municipal And Industrial Data (MAID) Labs Technologies is a privately owned company which reinvests over 20% of its net profits in research and development every year. Fifteen years ago, its technical staff created flow technologies which are still sold by leading manufacturers as state of the art in 2008.

Founded in 2002, Maid Labs' mission is to supply the most useful operation and maintenance data as possible. Better data = Better decisions.

MAID Labs provides a complete service including:

- The installation and removal of the MerMaid data loggers and accessories,
- The analysis of all electrical, operational and hydraulic data,
- Multiple reports showing all detected anomalies by email,
- A phone number to call for explanations.

Comments:

Ask for a quotation. You will be surprised by the low cost of MAID Labs' technology.

Better data = Better decisions
